TriageTrak

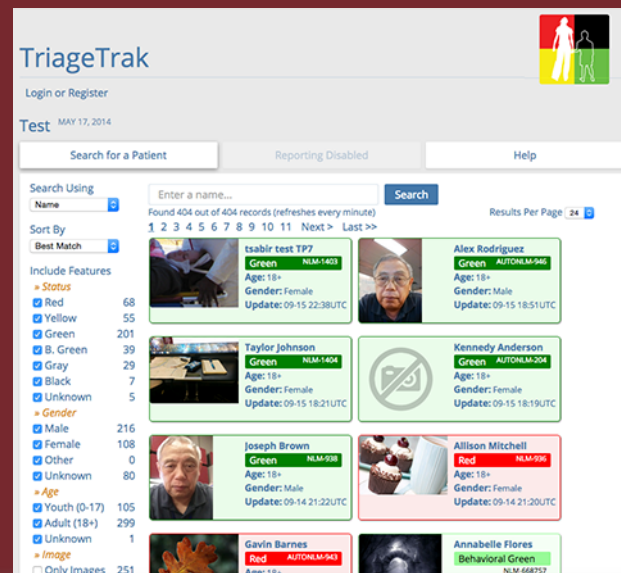

TriageTrak is a website for family reunification that is meant to be used when a large scale disaster, such as a typhoon, earthquake or other widespread event, occurs. When such an event occurs, individual hospitals that have installed the U.S. National Library of Medicine TriageTrak website (demonstrated here https://triagetrak.nlm.nih.gov) can help persons affected by the disaster. TriageTrak may be used, by hospital staff, to search for missing persons, or to report either missing or found persons.

BASIC FEATURES:

· Report a missing or found person and their triage status.
· Search for a person by name or photo.
· Use sorting, filtering, and matching (both text and photos).
· Data is kept current.
· All posted data is not public, except where noted.

ADVANCED FEATURES:

· Add GPS location into the reports.
· Search the reports by photo.
· Search and report with TriagePic® (app or application).
· Data protection and encryption for securing information.
